SUMMARY

Cybersecurity Professional specializing in SOC Operations, Threat Detection, and Adversary Emulation with proven expertise in high-throughput network analysis and ML-backed intrusion architectures. Demonstrated success in identifying 25+ OWASP Top 10 vulnerabilities, reducing false positive alerts by 35%, and conducting deep packet inspection across hybrid Linux/Windows enterprise environments. Adept at bridging offensive assessment findings with defensive incident engineering to accelerate threat containment.

EDUCATION

Higher Technological Institute (HTI) — Heliopolis

Bachelor of Information Technology

Expected May 2029

Cairo, Egypt

- Academic Focus: Network Security, Information Security Architecture, Operating Systems, Threat Detection Systems.

EXPERIENCE

Alignerr

Mar 2026 – Aug 2026

AI Penetration Testing & Security Expert (Contract)

Remote

- Executed 40+ red teaming engagements across production AI applications, identifying and mitigating critical zero-day prompt injection and model jailbreak vectors.
- Audited 35+ RESTful API endpoints and backend inference pipelines, remediating Broken Object Level Authorization (BOLA) and preventing potential data leakage.
- Delivered comprehensive vulnerability reports with CVSS v3.1 severity scores and reproducible Proof-of-Concepts (PoCs), driving 100% remediation across identified pipeline exposures.

Mercor

May 2025 – Jan 2026

Cybersecurity & Penetration Testing Specialist (Contract)

Remote

- Executed end-to-end vulnerability assessments across 15+ web applications and network segments aligning with OWASP Top 10 and PTES standards, identifying 25+ actionable security flaws.
- Conducted multi-vector privilege escalation and exploitation simulations using Burp Suite, Metasploit, and Nmap to pinpoint critical defense gaps.
- Partnered with cross-functional engineering teams to validate security patches, improving mean time to remediate (MTTR) by 30%.

PROJECTS

NeuroSnare: AI-Powered IDS/IPS & Honeypot Redirection System

2026

- Engineered a high-performance IDS/IPS in Python processing 10,000+ packets/sec for real-time anomaly detection and intrusion mitigation.
- Designed automated deception infrastructure using Docker containers, isolating and profiling 95% of active unauthorized exploitation attempts.
- Implemented machine learning classification models to inspect network traffic, achieving a 94% threat detection accuracy and reducing false alerts by 35%.

AI-Based IDS/IPS System (Huawei Project)

2026

- Engineered AI-driven detection models trained on multi-class network attack datasets, sustaining a 92% detection accuracy rate.
- Programmed automated threat mitigation rules that dropped malicious connections and quarantined host IPs in under 2 seconds.
- Correlated raw PCAP logs across distributed network endpoints to enrich threat intelligence feeds and detection accuracy.

SpiderForge: Automated Web Security Assessment Platform

2026

- Developed an automated CLI framework for attack surface reconnaissance, reducing initial target asset discovery time by 50%.
- Engineered automated scanning logic for 10 OWASP vulnerability classes, detecting SQLi, XSS, and SSRF flaws with zero third-party dependencies.
- Automated technical report generation to produce reproducible test cases and prioritized remediation guidance.

Mobile & Web Application Penetration Testing Labs

2025

- Performed application security evaluations on 12 deliberately vulnerable Android and web lab environments using Burp Suite and Metasploit.
- Authored 10+ end-to-end vulnerability reports with PoCs, vulnerability root causes, and verification steps.

Embedded Systems & Hardware Security Labs

2025

- Configured Digispark ATtiny85 microcontrollers to simulate BadUSB keystroke injection vectors, validating endpoint physical security policies.
- Executed Wi-Fi deauthentication and rogue access point simulations using ESP32 modules to demonstrate perimeter access risks.

SKILLS

Offensive Security: Web & Mobile Penetration Testing, API Security, OWASP Top 10, Vulnerability Assessment, Exploitation, Privilege Escalation, Threat Emulation

Defensive Security & SOC: SIEM Monitoring, Log & Network Traffic Analysis, Incident Response, Cyber Threat Intelligence (CTI), IDS/IPS Architectures, Honeypots

Tools & Platforms: Burp Suite, Metasploit, Nmap, Wireshark, Splunk, Wazuh, Docker, Linux (Kali, Ubuntu), Git

Networking & Systems: Linux Hardening & Administration, TCP/IP Protocols, Packet Analysis, Windows Security Fundamentals

Programming & Automation: Python Scripting, Security Automation, Machine Learning for Threat Detection

Professional & Soft Skills: Analytical Problem Solving, Critical Thinking, Technical Documentation, Stakeholder Communication, Cross-Functional Collaboration, Incident Handling & Prioritization, Ethical Conduct

Languages: Arabic (Native), English (Intermediate - B1), Italian (Elementary - A2)

CERTIFICATIONS

AI-Based IDS/IPS Security Certification — Huawei & HIT (2026)

Introduction to Generative AI — Google Cloud (2026)

OPSWAT Cybersecurity Fundamentals (Associate) — OPSWAT (2025)

Introduction to Critical Infrastructure Protection (ICIP) — OPSWAT (2025)

Mobile Penetration Testing Certification (2025)

OSCP Preparation / Offensive Security Training — Edux Academy (2025)

Certified Ethical Hacker (CEH) Coursework — Edux Academy (2025)
