## SUMMARY

OSCP-certified Cybersecurity professional specializing in Red Teaming and offensive security. Proven hands-on experience in web, mobile, and hardware penetration testing, alongside building AI-powered detection systems. Experienced in vulnerability assessment, exploitation, web application security, and offensive security methodologies.

## EDUCATION

### Bachelor of Computers and Information

2029

Higher Technological Institute (HTI) – Heliopolis Degree In Progress | Expected Graduation:

2029

- **Offensive Security Labs & CTFs:** Active participation in cyber security challenges and team simulations.
- **Web Exploitation & Privilege Escalation:** Practiced identifying flaws and escalating privileges in controlled environments.
- **Real-World Attack Scenarios:** Simulating realistic offensive methodologies to understand defense-in-depth mechanisms.

## SKILLS

### Web & Mobile

#### Penetration Testing

OWASP Top 10, Authentication, Injection, API Security, API Testing

### Programming & Automation

Python Scripting & Automation

### Networking &

#### Operating Systems

Linux, TCP/IP

### Security Tools

Burp Suite, Nmap, Metasploit, Wireshark

## CERTIFICATIONS

### Offensive Security Certified Professional (OSCP) – Edux Academy

2025

### Certified Ethical Hacker (CEH) – Edux Academy

2025

### OPSWAT Cybersecurity Fundamentals (Associate) – OPSWAT

2025

### Mobile Penetration Testing Certification

2025

### AI-based IDS/IPS Security Certification – Huawei & HIT

2026

### Introduction to Critical Infrastructure Protection (ICIP)

2026

### Introduction to Generative AI – Google Cloud

2026

## PROJECTS & HANDS-ON LABS

### SpiderForge — Automated Web Security Assessment Platform

2026

- Developed an automated web security assessment platform designed to streamline reconnaissance, vulnerability discovery, and security testing across web applications.
- Implemented automated identification and assessment of **OWASP Top 10** vulnerabilities, supporting systematic analysis of common web application security weaknesses.
- Applied **Red Team methodologies** to simulate realistic attack paths, combining automated security testing with offensive security techniques.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |      |
